# AI-Powered CV Assistant Documentation

# **Quick Start Guide**

## 1.Prerequisites

- Bun (latest version)
- Node.js 18+
- OpenAI API Key

## 2.Installation Steps:

- Clone & Install
  - Clone the repository
  - Run 'bun install' to install dependencies
- Environment Setup
  - Copy `.env.example` to `.env.local`
  - Add your OpenAI API key
  - Configure any additional environment variables
- Development
  - Run 'bun dev' to start the development server
  - Access the application at [http://localhost:3000](http://localhost:3000)

# 3. Testing Guide

- Running Tests
  - All Tests: 'bun test'
  - Watch Mode: 'bun test --watch'
  - Coverage: 'bun test --coverage'
- Test Structure
  - Unit tests for CV Agent (see `\_\_tests\_\_/services/AgentService.test.ts`)
  - Integration tests for CV processing flow
  - Component tests for rich text editor

## 4. AI Agent Implementation

## **Core Components**

#### I. CV Parser

- a. Handles multiple file formats (PDF, DOCX, TXT)
- b. Extracts text and maintains formatting
- c. Converts to standardized HTML structure

## II. CV Agent

- a. System-wide rules and capabilities defined in constructor
- b. Multi-step processing pipeline
- c. Token optimization and chunking for large documents

## **Processing Pipeline**

## I. Anonymization

- a. Removes personal identifiable information
- b. Preserves first names only
- c. Maintains professional credentials
- d. Keeps company and institution names

## II. Reformatting

- a. Structures content into clear sections
- b. Applies consistent HTML formatting
- c. Maintains semantic structure
- d. Adds professional styling

#### III. Enhancement

- a. Improves language clarity
- b. Strengthens achievement descriptions
- c. Maintains factual accuracy
- d. Preserves key information

## IV. Career Analysis

- a. Job recommendations
- b. Career progression planning
- c. Skill gap analysis
- d. Development roadmap

## **5. Security & Performance**

- Security Measures
  - Environment variable protection
  - Input sanitization
  - Rate limiting
  - Token optimization
- Performance Optimization
  - Chunk processing for large documents
  - CSS optimization
  - Efficient state management
  - Error handling and recovery

## 6.Additional AI Features

- I. Job Recommendations
  - a. Analyzes CV content
  - b. Matches skills to positions
  - c. Provides detailed reasoning
  - d. Suggests skill improvements
- II. Career Planning
  - a. Short-term goals
  - b. Long-term progression
  - c. Skill development paths
  - d. Industry insights

# 7. Troubleshooting

## **Common Issues**

- I. API Key Issues
  - a. Verify key in .env.local
  - b. Check API access
  - c. Confirm rate limits
- I. File Processing
  - a. Supported formats only
  - b. Size limitations
  - c. Format requirements
- II. Performance
  - a. Large file handling
  - b. Processing timeouts
  - c. Memory management

# **Agentic AI Approach Documentation Overview**

Our CV processing system implements a multi-step agent-like approach using the CVAgent class, which orchestrates several specialized tasks in a pipeline. The agent maintains conversation context and handles complex CV processing through distinct, specialized steps.

## **Core Agent Capabilities**

- Conversation Management
- Maintains a system prompt defining agent capabilities
- Handles context management for multi-step processing
- Implements token management and chunking for large documents
- Specialized Processing Steps
- Anonymization
- Reformatting
- Enhancement
- Career Analysis
- Job Matching

# **Agent Pipeline Steps**

# 1. Anonymization Agent

- Removes personally identifiable information
- Preserves first names only
- Maintains professional credentials
- Handles various name formats and structures

## 2. Reformatting Agent

- Structures content into semantic sections
- Applies consistent formatting rules
- Maintains professional hierarchy

## 3. Enhancement Agent

- Improves language and impact
- Quantifies achievements
- Maintains factual accuracy

# 4. Career Planning Agent

- Analyzes current career level
- Provides progression roadmap
- Suggests skill development

# **Agent Intelligence Features**

- Adaptive Processing
- Handles large documents through intelligent chunking
- Manages token limits automatically
- Preserves document structure across processing steps
- Context Awareness
- Maintains formatting consistency
- Preserves critical information
- Ensures professional tone
- Error Handling
- Graceful degradation for large documents
- Token limit management
- Format preservation safeguards

# **Integration with UI**

The agent system is integrated with the UI through a step-by-step process, allowing users to:

- View each transformation stage
- Compare changes
- Edit and download results
- Generate career insights

# **Testing Approach**

The agent system includes comprehensive testing:

This testing ensures:

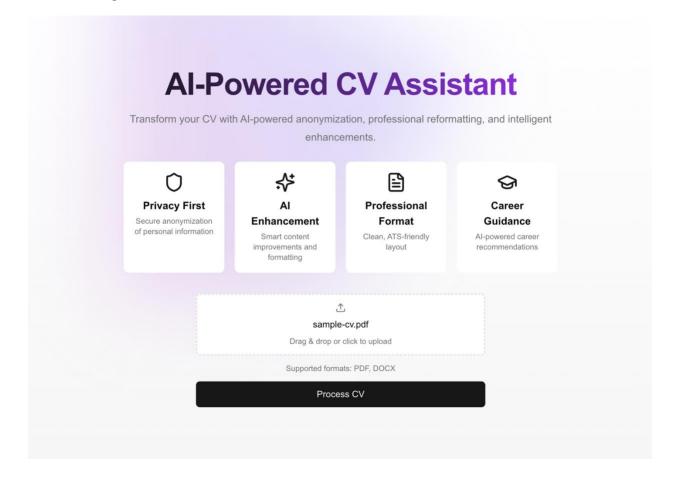

- Accurate anonymization
- Proper formatting
- Content enhancement quality
- Career guidance accuracy

The agentic approach provides a sophisticated, multi-step processing pipeline that maintains context and ensures high-quality CV processing while providing valuable career insights.

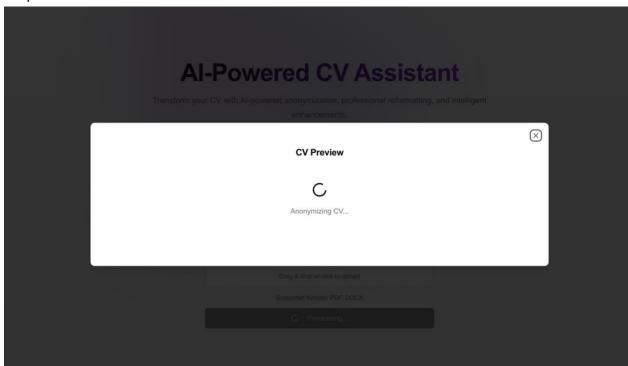

The entire project gives the user a better format of their resume and also insights on the enhanced resume using AI.

Below are the screenshots of the entire working of the project :

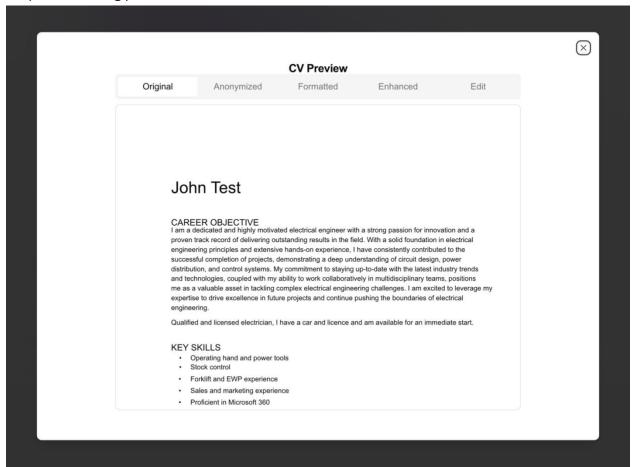

# 1. Home Page

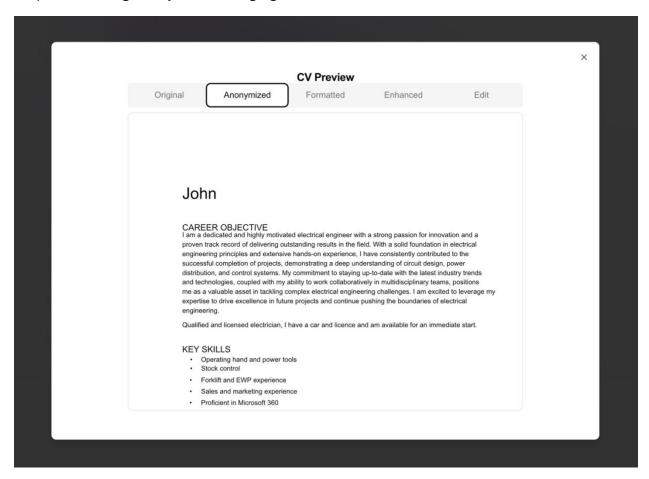

# Step 2:

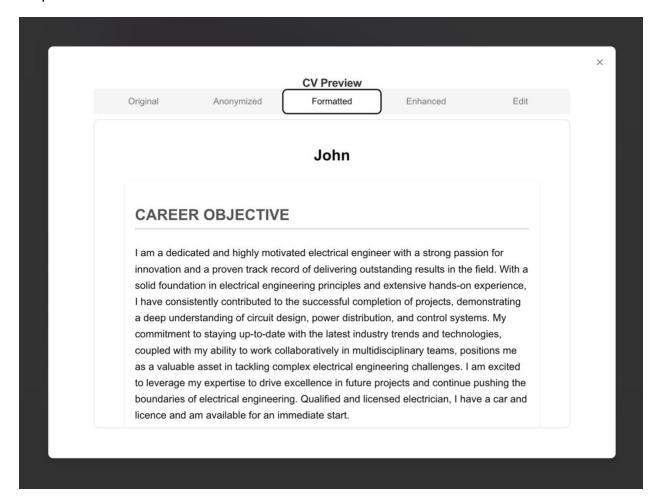

Step 3: CV being parsed.

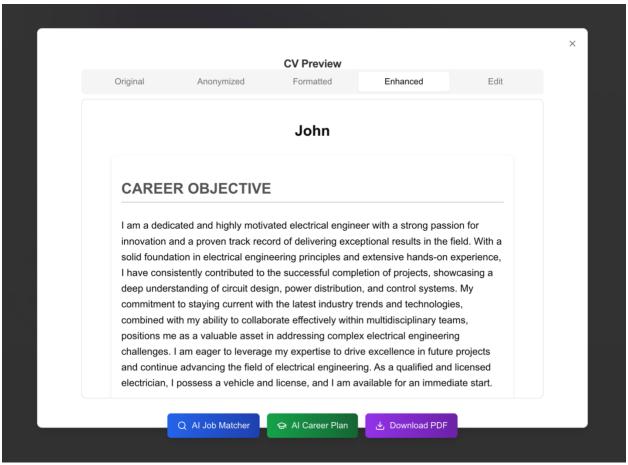

Step 4: CV being anonymized using Agent Al

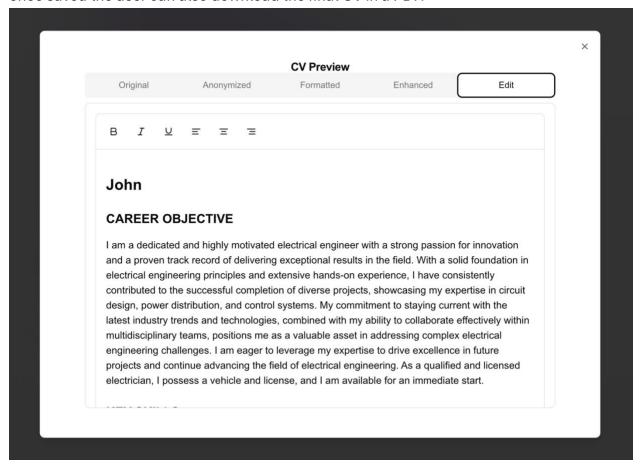

Step 5: A well formatted CV

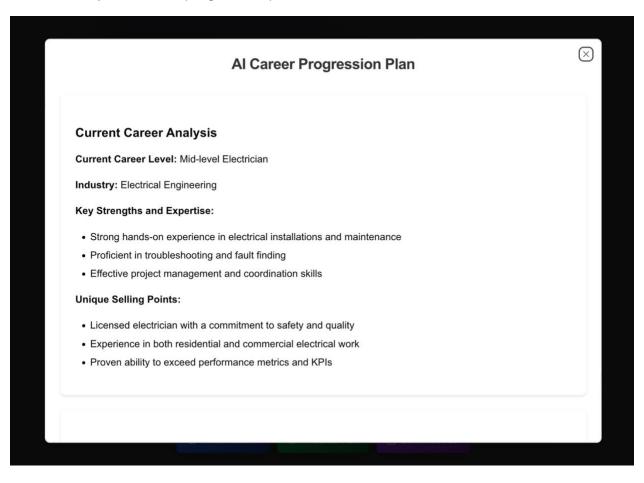

Step 6 : A well enhanced CV which has AI recommendation options and the user can also download the enhanced CV in a pdf.

Step 7: Rich text editor which allows the user to make final edit and also save changes, once saved the user can also download the final CV in a PDF.

Step 8 : You have AI career plan Functionality , where based on the enhanced CV AI will recommend you a career progression plan.

## Short-term Career Path (1-2 years)

#### **Immediate Role Opportunities**

• Role: Senior Electrician Salary Range: \$70,000 - \$85,000

Required Skills/Certifications: Advanced electrical certifications, project management skills

Potential Companies/Industries: Electrical contracting firms, renewable energy companies

• Role: Electrical Project Coordinator

Salary Range: \$75,000 - \$90,000

Required Skills/Certifications: Project management certification (PMP), strong communication skills

Potential Companies/Industries: Construction firms, engineering consultancies

Role: Maintenance Supervisor
Salary Range: \$80,000 - \$95,000

Required Skills/Certifications: Leadership training, maintenance management experience

Potential Companies/Industries: Aged care facilities, commercial property management

Step 9: Based on the Enhanced CV , AI will also recommend you jobs to apply , based on your enhanced resume.
